

How to give your JD10 a foot switchable Master Volume

SoloBooster™ is a handy footswitchable MASTER VOLUME control that can be used to lower the volume of your soloing sound for use behind a vocal. Then when it's time for your solo you just step on the footswitch for full-on solo volume - easy

It still works whether JD10 is in ACTIVE or BYPASS modes

More details on our website: Award-Session.com

Warning - SoloBooster is designed to be used in Effects Loops, so it will probably not work as depicted above with other makes of distortion pedals

We custom make a huge range of excellent cables, from 20cm to 100mtrs!

Guitar, Keyboard, Speaker and Microphone

Every one custom made to your order

**Have the cable length and connector combinations YOU want
...not just what the shops have available!**
